

# PALLET GEL

product of **PMI TAPE**

## Installation Instructions

Scan the QR Code to view the installation video.

## Important Instructions

STEP  
1

### Clean the Pallets

PalletGel sticks best directly to clean and dry pallets. Do not apply PalletGel on top of paper pallet tape. PalletGel will peel cleanly when you replace it months later.

STEP  
2

### Apply PalletGel

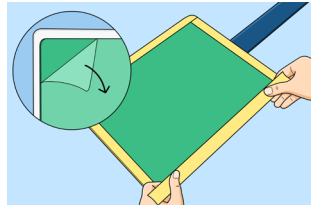

Apply the back edge of PalletGel directly to your pallet. While holding the opposite end of PalletGel up and off of the pallet, use a squeegee card or something rigid to squeegee PalletGel onto the pallet. Take your time here to avoid air bubbles. PalletGel will be on your pallets for a while.

STEP  
3

### Tape the Edges

Remove the top release liner from PalletGel and use masking tape to tape down all four sides of PalletGel to the pallets. This will help shirts slide on and off of the pallets easily. It will also ensure PalletGel doesn't lift over time.

## PalletGel Features

### Durable 1mm thick Gel adhesive on the garment side

- Lasts for about 100,000 impressions
- Lint can be easily cleaned off with water and a scrub pad
- Ink can be removed from PalletGel with on press cleaners without damaging PalletGel

### PalletGel changes color from green to yellow when your pallets are heated to 120F Warm/Preheated pallets:

- Allow ink to flow through mesh smoothly
- Help prevent ink from sticking to the bottom of your screens
- Ensure consistency so your first print will be like your last
- Speed up flash time

### PalletGel is applied directly to the pallets - No need for paper pallet tape

Film release liners on both sides that don't wrinkle for a smooth application
